```
This invention describes a novel synthetic block copolymer XYZ comprising two alpha-helical protein blocks x and Z, a water soluble, random-coil converted by the converted block y which links x and Z, and linker proteins for linking the call protein block y which links x and Z, and linker proteins for linking the call protein block to the random-coil protein block. The copolymer helical protein blocks to the random-coil protein block. The copolymer produced in water to form a gel, which was then used to treat a wound. The cell coping to spria/IIIa proteins expressed on fibroblast cells necessary for matrix formation for the regeneration of skin. Fibroblasts become compared within the gel and thus remain at the site of the wound, copolymer so a scaffold for the regeneration of tissue surrounding the compound. A synthetic block copolymer together with an antiblotic compound is useful for wound dressing. The copolymer is useful for dressing the copolymers of equal size are produced biologically from a single template. The intermolecular binding of alpha-helical blocks are monodisperse which gives a uniform pore size depending on the length of random-coil block. The new copolymers have low molecular weight hence have decreased corposents a copolymer block protein L2-A which is used to illustrate the method of the invention.

This invention describes a novel synthetic block copolymer XYZ comprising two alpha-helical protein blocks X and Z, a water soluble, random-coil coil protein block Y which links X and Z, and linker proteins for linking the CC alpha-helical protein blocks to the random-coil protein block. The CC products of the invention have vulnerary activity. A copolymer produced in water to form a gel, which was then used to treat a wound. The cell coinding domain was the integrin ArgGlyAspSer sequence which is known to bind to applia/IIIa proteins expressed on fibroblast cells necessary for commatrix formation for the regeneration of skin. Fibroblasts become company as a scaffold for the regeneration of skin. Fibroblasts become compound. A synthetic block copolymer together with an antibiotic compound is useful for wound dressing. The copolymer is useful for dressing companies and formation of non-puncture wound. Unlike conventional polymers, the polymers of equal size are produced biologically from a single template. The new copolymers have low molecular weight hence have decreased component or opplymers have low molecular weight hence have decreased component of the invention. This sequence method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              dressing abrasion, burn or non-puncture wound, comprises two alpha-helical protein blocks, random-coil protein block and linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Column 33-34; 53pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     subsequent genetic manipulations: The DNA sequence use a "mixed site" approach at the first base of the codons for amino acids positions 5 and 7 of the heptad (see below). The formation of a self-assembling structural material is mediated by the artificial recognition sequences (e.g. present sequence). A method of producing a self-assembling protein-based structural material comprises mixing a multiplicity of 2 different artificial peptide sequences, designed so as to spontaneously heterodimerise. Both artificial peptides have a coiled-coil spontaneously heterodimerise into a self-assembled call peptides spontaneously heterodimerise into a self-assembled protein-based structural materials. The method is used to produce nanoscale structural materials designed for specific functions e.g. membranes, fibres, absorbants, reactive materials, etc. A specific application is in the fabrication of selectively permeable membranes for hazardous materials. Materials for medical implants, wound healants and other medical treatments would also be feasible using this technology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

This DNA sequence is CC obtained by reverse translation. The codons were chosen to maximise CC expression in Escherichia coli, and to introduce useful restriction for capproach at the first base of the codons for amino acids positions 5 and CC approach at the first base of the codons for amino acids positions 5 and CC of the heptad (see below). The formation of a self-assembling CC structural material is mediated by the artificial recognition sequences (e.g. present sequence). A method of producing a self-assembling CC protein-based structural material comprises mixing a multiplicity of CC 2 different artificial peptide sequences, designed so as to CC spontaneously heterodimerise. Both artificial peptides have a coiled-coil alpha helical secondary structure having at least 2 heptad units. The CC artificial peptides spontaneously heterodimerise into a self-assembled CC protein-based structural material. The method is used to produce CC membranes, fibres, absorbants, reactive materials, etc. A specific capplication is in the fabrication of selectively permeable membranes for protective gloves and coated fabrics for fuel handlers and other cother medical treatments and the fabrication of selectively to the produce of their medical treatments and for medical implants, wound healants and cother medical treatments and the fabrication of selective the tophology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Š

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc subsequent genetic manipulations. The DNA sequence use a "mixed site" capproach at the first base of the codons for amino acids positions 5 and 7 of the heptad (see below). The formation of a self-assembling cc fructural material is mediated by the artificial recognition sequences (e.g. present sequence). A method of producing a self-assembling cc protein-based structural material comprises mixing a multiplicity of 2 different artificial peptide sequences, designed so as to gontaneously heterodimerise. Both artificial peptides have a colled-coil cc spontaneously heterodimerise. Both artificial peptides have a colled-coil calpha helical secondary structure having at least 2 heptad units. The cc artificial peptides spontaneously heterodimerise into a self-assembled protein-based structural materials. The method is used to produce canoscale structural materials designed for specific functions e.g. membranes, fibres, absorbants, reactive materials, etc. A specific application is in the fabrication of selectively permeable membranes for protective gloves and coated fabrics for fuel handlers and other cc other medical treatments would also be feasible using this technology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           in water to form a gel, which was then used to treat a wound. The cell binding domain was the integrin ArgGlyAspSer sequence which is known to binding domain was the integrin ArgGlyAspSer sequence which is known to complete the proteins expressed on fibroblast cells necessary for matrix formation for the regeneration of skin. Fibroblasts become centrapped within the gel and thus remain at the site of the wound, serving as a scaffold for the regeneration of tissue surrounding the wound. A synthetic block copolymer together with an antibiotic compound is useful for wound dressing. The copolymer is useful for dressing cis useful for wound dressing. The copolymer is useful for dressing cis useful for wound dressing. The copolymer is useful for dressing cis useful for wound are produced biologically from a single template. The intermolecular binding of alpha-helical blocks are monodisperse which gives a uniform pore size depending on the length of random-coll block. The new copolymers have low molecular weight hence have decreased coviscosity solutions or gels under suitable conditions. This sequence represents the colled coil protein Bl which is used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

AAW43024-28 represent recognition sequences obtained from the library recognition sequences coded for by AAV04943. This DNA sequence is obtained by reverse translation. The codons were chosen to maximise expression in Escherichia coli, and to introduce useful restriction for subsequent genetic manipulations. The DNA sequence use a "mixed site" approach at the first base of the codons for amino acids positions 5 (
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recognition sequence; self-assembling; protein-based structural material; spontaneous heterodimerisation; coiled-coil alpha helix; selectively permeable membrane; coated fabric.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8888888888888888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC 7 of the heptad (see below). The formation of a self-assembling CC structural material is mediated by the artificial recognition sequences (e.g. present sequence). A method of producing a self-assembling CC protein-based structural material comprises mixing a multiplicity of CC 2 different artificial peptide sequences, designed so as to comprise sequences of the sequences of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

AAW43024-28 represent recognition sequences obtained from the library of recognition sequence coded for by AAV04943. This DNA sequence is obtained by reverse translation. The codons were chosen to maximise expression in Escherichia coli, and to introduce useful restriction for subsequent genetic manipulations. The DNA sequence use a "mixed site" approach at the first base of the codons for amino acids positions 5 and 7 of the heptad (see below). The formation of a self-assembling structural material is mediated by the artificial recognition sequences (e.g. present sequence). A method of producing a self-assembling protein-based structural material comprises mixing a multiplicity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8661-AW-80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW43024;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW43024 standard;

products of the invention have vulnerary activity. A copolymer produced from a gene that encodes a derivative of AC_10A copolymer was suspended in water to form a gel, which was then used to treat a wound. The cell binding domain was the integrin ArgGlyAspSer sequence which is known to bind to gpITa/IIIa proteins expressed on fibroblast cells necessary for matrix formation for the regeneration of skin. Fibroblasts become entrapped within the gel and thus remain at the site of the wound, serving as a scaffold for the regeneration of tissue surrounding the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  spontaneously heterodimerise. Both artificial peptides have a coiled-coil alpha helical secondary structure having at least 2 heptad units. The artificial peptides spontaneously heterodimerise into a self-assembled protein-based structural material. The method is used to produce nanoscale structural materials designed for specific functions e.g. membranes, fibres, absorbants, reactive materials, etc. A specific application is in the fabrication of selectively permeable membranes for protective gloves and coated fabrics for fuel handlers and other hazardous materials. Materials for medical implants, wound healants and other medical treatments would also be feasible using this technology.
                                                                                                                                 This invention describes a novel synthetic block copolymer XYZ comprising two alpha-helical protein blocks X and Z, a water soluble, random-coil protein block Y which links X and Z, and linker proteins for linking the alpha-helical protein blocks to the random-coil protein block. The
                                                                                                                                                                                                                                                                   Synthetic block copolymer with an antibiotic compound, useful for dressing abrasion, burn or non-puncture wound, comprises two alpha-helical protein blocks, random-coil protein block and linke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US6090911-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Unidentified

A synthetic block copolymer together with an antibiotic compound is useful for wound dressing. The copolymer is useful for dressing abrasion, burn or non-puncture wound. Unlike conventional polymers, the polymers of equal size are produced biologically from a single template. The intermolecular binding of alpha-helical blocks are monodisperse which gives a uniform pore size depending on the length of random-coil block. The new copolymers have low molecular weight hence have decreased viscosity solutions or gels under suitable conditions. This sequence represents the coiled coil protein Al which is used to illustrate the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   reverse translation. The codons were chosen to maximise expression in Escherichia coli, and to introduce useful restriction for subsequent genetic manipulations. The DNA sequence use a "mixed site" approach at the first base of the codons for amino acids positions 5 and 7 of the heptad (see below). The formation of a self-assembling structural compared the present sequence. A method of producing a self-assembling protein based structural peptide sequences, designed so as to spontaneously heterodimerise. Both artificial peptides spayed as a to spontaneously heterodimerise into a self-assembled protein-based structural peptide sequences, designed so as to spontaneously heterodimerise into a self-assembled protein-based cructural material. The method is used to produce nanoscale structural materials ento a self-assembled protein-based cructural materials. The method is used to produce nanoscale structural materials, reactive materials, etc. A specific application is in the calculation of selectively permeable membranes for protective gloves and coated fabrics for fuel handlers and other hazardous materials. Materials for medical implants, wound healants and other medical treatments would be to hope the coated to produce the coated to protein the coated to protective gloves and coated fabrics for fuel handlers and other medical treatments would be also feasible using this technology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

The method comprises immobilising a polypeptide to a physical support, contacting the immobilised polypeptide with a test sample which may contacting the immobilised polypeptide with a binding partner polypeptide, where association of both polypeptide is dependent on the modification state of the immobilised polypeptide to the immobilised polypeptide. The polypeptide to the immobilised polypeptide. The polypeptide is dependent on the modification of the binding partner polypeptide to the immobilised polypeptide. The polypeptides, support and methods can be used to analyse a sample to determine if modification of a polypeptide is taking place and to identify modulators of the modification. This is useful for monitoring the post-translational modification of proteins. AAB08364-65 represent binding partners which have coiled coil structures, and may be used in
                                                             High throughput assay for monitoring modification of polypeptides and modulation of the modifications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Binding partner; protein modification; modulator; coiled-coil structure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 High throughput assay for monitoring modification of polypeptides and modulation of the modifications -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The specification describes a method for analysing a sample. The method comprises immobilising a polypeptide to a physical support, contacting the immobilised polypeptide with a test sample which may contacting agent capable of modifying the immobilised polypeptide, contacting the immobilised polypeptide with a binding partner polypeptide, where association of both polypeptide is dependent on the modification of the immobilised polypeptide, and measuring the association of the binding partner polypeptide to the immobilised polypeptide. The polypeptides, support and methods can be used to analyse a sample to determine if modification of a polypeptide is taking place and to identify modulators of the modification. This is useful for monitoring the post-translational modification of proteins. AAB08383-84 represent binding partners which are used, in the method of the invention, to assay for tobacco etch virus (TEV) protease activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

```

۲.

This invention describes a novel protease substrate for detecting a target protease which comprises a polypeptide containing a high-affinity binding site (1) for binding to a support, a cleavage site (2) specific for the target protease, and a sequence of amino acids forming a stretched helix (3). The substrate is useful for measuring protease activities and in online screening assays for proteases or protease inhibitors, especially based on surface plasmon resonance.

                                                                                                                                                                                                                                                                                              This invention describes a novel protease substrate for detecting a target protease which comprises a polypeptide containing a high-affinity binding site (1) for binding to a support, a cleavage site (2) specific for the target protease, and a sequence of amino acids forming a stretched helix (3). The substrate is useful for measuring protease activities and in online screening assays for proteases or protease inhibitors, especially based on surface plasmon resonance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Protease substrate useful for measuring protease activities and in online screening assays for proteases or protease inhibitors, comprises a polypeptide with a binding site, a cleavage site and a stretched helix -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DE19941239-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HIV protease-associated

The method comprises immobilising a polypeptide to a physical support, contacting the immobilised polypeptide with a test sample which may contain an agent capable of modifying the immobilised polypeptide, contacting the immobilised polypeptide with a binding partner polypeptide, where association of both polypeptide is dependent on the modification state of the immobilised polypeptide, and measuring the association of the binding partner polypeptide to the immobilised polypeptide. The polypeptides, support and methods can be used to analyse a sample to determine if modification of a polypeptide is taking place and to identify modulators of the modification. This is useful for monitoring the post-translational modification of proteins. AAB08344-45 represent the modification of proteins. AAB08344-45 represent the modification of proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               High throughput assay for monitoring modification of modulation of the modifications \,\,\boldsymbol{\cdot}\,\,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score

No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

POLITION of the hemagglutinin of equine H3 influenza vi
Virology 169:283-292(1989).

-I- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING
CELL RECEPTORS AND FOR INITIATING INFECTION.

-I- SUBUNIT: HOMORINER. EACH OF THE MONOMER IS FORMED BY
(HAI AND HA2) LINKED BY A DISULFIDE BOND.

Virology 169:408-417(1999).
1- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS
CELL RECEPTORS AND FOR INITIATING INFECTION.
1- SUBUNIT: HOMOTRIMER. EACH OF THE MONOMER IS FORMED BY TWO CHAIN
(HA1 AND HA2) LINKED BY A DISULFIDE BOND.
1- SIMILARITY: BELONGS TO THE INFLUENZA HEMAGGLUTININ FAMILY.
                                                                                                                                                                                           EMBL; M25284; AAA43217.1;
